December 11, 2015

We, Curtis-Straus are authorized by the applicant, eco Vent, to apply for a Class II Permissive Change of their following radio equipment

FCC ID: 2AFTLSV1

The reason for filing a Class II Permissive Change is the addition of channels to the existing application of the 915MHz radio. Please see the following:

This permissive change will modify the operating frequency range from 915MHz to also include the full 904-926MHz band. The radio will utilize a programmed channel width of 200 kHz however, in order to ensure adequate channel separation in our system implementation, we will only be operating on every 10th channel (2.0 MHz channel separation)

The product will continue to use the same modulation (2-FSK) as in the original application. The addition of the new channels is just a software change.

Ch # MHz

0 904  
10 906  
20 908  
30 910  
40 912
